JULY 2021

Goshen County Weed & Pest NEWSLETTER

HERBICIDE OF THE MONTH
REJUVRA®

It's no secret that cheatgrass is becoming a threat to agricultural land throughout Wyoming.

Multi-year control

Photo: www.environmentalscience.bayer.us

Consistent & long-term control

Rejuvra herbicide attacks cheatgrass!

Fewer applications

Higher in cost than previous modes of action

No grazing restrictions (applications of 5 oz/acre)

Effective tool for control of herbicide-resistant weeds

The newest herbicide to hit the market for annual grass and broadleaf control is Rejuvra®. With the active ingredient indaziflam, this product's primary mode of action is to refrain seedling emergence and root development. Rejuvra® is a pre-emergent herbicide and is an effective control when properly applied with the recommended rate. Herbicides for controlling cheatgrass are most effective when applied during midsummer. Annual grasses can pop-up in treated areas if coverage is uneven or if correct rate was not applied. Unlike other herbicides, Rejuvra® doesn't leach or vaporize when applied, allowing for better and longer lasting results. Rejuvra® is available at GCWP office, call in or swing by on more information controlling cheatgrass.

50/50 COST-SHARE PROGRAM

Goshen County landowners, we have some exciting news for you!

Starting July 1, 2021 GCWP will offer cost-share to those landowners who are battling noxious/invasive weeds that are on our designated and declared list.

For more information on GCWP's newest cost-share program call the office or come in and see us. We can get you on your way to cleaning up your property by managing your invasive species population.

STAY IN THE KNOW

- Happy 4th of July - office closed July 5
- Find us at Third Thursday - July 15
- Ask about our cost-share programs

WHAT'S THE WORD ON THE STREET

Goshen County Weed & Pest mosquito program is annual an program funded by the Emergency Insect Management Grant. The grant allows for community fogging to take place. Questions often asked are, what insecticide is used? Is it harmful to bees, humans and pets?

GCWP uses an insecticide called Perm-X UL 4-4 that is applied through the fogger. Permethrin is a pyrethroid used for controlling mosquitoes, and other flying insect.

Precautions taken by GCWP:

- Evening treatments to avoid bee activity
- ULV fogging application releases small amounts of insecticide that target mosquitoes, yet will not affect non-targeted insects (like bees)
- Use of a synthetic insecticide (pyrethroid) is non-toxic to mammals.

(found in pet shampoos & sprays, human head lice treatments, topical mosquito repellents and in home use insecticide sprays.)
